

COVID-19: Building our world, together.

We can start your trial today. It's business as usual in Australia and New Zealand.

Now more than ever, clinical research is a vital part of the healthcare system.

As the world responds to COVID-19, Australia and New Zealand have become uniquely positioned in the clinical trial landscape. Both countries have employed civil lock-downs to contain the novel coronavirus, and both countries are seeing the benefits of implementing these measures.

Australia and New Zealand are optimal regions in which to conduct clinical trials. This is due to several compounding factors, which include:

- Low COVID-19 rates and low transmission rates
- Hospitals and health systems are functioning
- Clinical trials are deemed an essential service by government
- Ethics and regulatory applications are unaffected
- 8-12 week rapid start-up timelines
- COVID-19 study approvals are fast-tracked
- Sites are recruiting for new and existing studies

Conducting your trial here requires local experts; a team that knows the area inside and out. Pharmaceutical Solutions has worked in Australia and New Zealand for twenty years, and we're proud to bring this experience to our clients' studies.

Some of our key qualities are:

- Strong relationships across Australia and New Zealand
- Transparent communications
- Integrity and honesty
- Collaborative thinking
- Creative innovative solutions
- Thinking outside the box

As a boutique CRO, Pharmaceutical Solutions can tailor our approach to your study. We treat each clinical study with care and diligence, and our team can deliver the outcomes you're looking for. Success is in our DNA.

We are living through an extraordinary moment in history. As a team, our focus remains on one question: 'what can we do to help?'

"Which parts of my trial can begin?"
